GOODCAB'S TRANSPORTATION ANALYSIS

Transportation Performance & Demand Analytics

PROJECT OVERVIEW

GoodCab's Transportation Analysis is an end-to-end data analytics project focused on analyzing the operational performance of a cab service company operating in tier-2 cities across India. The objective of this project is to transform raw transportation data into meaningful insights that help understand trip demand patterns, passenger behavior, city performance, and overall operational efficiency.

BUSINESS PROBLEM

Transportation companies generate large volumes of operational data including trip records, passenger information, revenue details, and service ratings. However, without structured analysis it becomes difficult for business stakeholders to track important metrics and identify operational trends.

GoodCab's required a clear and interactive analytical view to understand which cities generate the highest trips and revenue, how passenger demand changes over time, and whether operational targets are being achieved across different locations.

APPROACH

A structured data analytics approach was implemented in this project. SQL was used to extract and analyze transportation data from the database. Analytical queries were written to evaluate trip demand trends, city-wise performance, and passenger behavior patterns.

The processed data was then used to build an interactive Power BI dashboard that visualizes key operational metrics, helping stakeholders easily monitor business performance and identify opportunities for improvement.

TOOLS & TECHNOLOGIES

- SQL – Data extraction and analytical queries
- Power BI – Interactive dashboards and data visualization
- Excel – Data exploration and validation
- GitHub – Project documentation and version control

KEY METRICS ANALYZED

- Total Trips
- Revenue Generation
- Passenger Ratings
- City-wise Trip Distribution
- Passenger Retention & Repeat Trips
- Target vs Actual Performance

KEY INSIGHTS

The analysis highlighted cities contributing the highest number of trips and revenue, identified demand variations across different months, and revealed patterns in passenger behavior such as repeat customers and service ratings.

The dashboard enables stakeholders to compare performance across cities, monitor demand trends, and evaluate operational efficiency through clear and interactive visual insights.

BUSINESS IMPACT

The GoodCab's Transportation Analysis dashboard provides a centralized and interactive view of operational performance.

By converting raw transportation data into clear visual insights, the project supports faster decision-making, helps identify operational improvement areas, and enables the operations team to optimize service performance and demand management.
